A COMPACT TENSIONER IN A NEW, MODERN DESIGN

A TENSIONER THAT FITS ALL HEAVY HAULAGE

The TU tensioner was developed to secure all kinds of heavy haulage loads, be they timber or other kinds of goods. Pneumatic tensioner mechanism release is available as an option. Release takes place at the press of a button in the cab. This means a wider field of application e.g. when the tensioner is located under a truckbed/box body where access is not the best. The tensioner can be tensioned manually when necessary.

TU TENSIONER ACCESSORIES
